APOLLO SPACECRAFT

C/M GUIDANCE, NAVIGATION, AND CONTROL SYSTEM

THE APOLLO GUIDANCE AND NAVIGATION SYSTEM IS COMPOSED OF THREE BASIC SUBSYSTEMS: INERTIAL, OPTICAL AND COMPUTER.

1. The inertial guidance subsystem is composed of inertial measurement unit (IMU) and associated equipment. This subsystem performs three major functions: (A) Measures changes in spacecraft attitude; (B) Measures spacecraft velocity due to thrust; and (C) Assists in generating steering signals.
2. The optical navigation subsystem is composed of a space sextant and a scanning telescope. Sightings on celestial bodies and landmarks on the moon and earth are used by the computer subsystem to determine the spacecraft's position and velocity and to align the inertial reference within the IMU.
3. The command module computer (CMC) provides five major functions: (A) Calculates steering signals and engine disretes necessary to keep the spacecraft on the required trajectory; (B) Positions the stable member in the IMU to a coordinate system defined by precise optical measurements; (C) Positions the optical unit to celestial objects; (D) Conducts limited malfunction isolation of the G&N system by monitoring the level and rate of system signals; and (E) Supplies pertinent spacecraft condition information to the display and control panel.

L/M GUIDANCE AND NAVIGATION EQUIPMENT LOCATION AND DESCRIPTION

INERTIAL MEASUREMENT UNIT (IMU) and associated equipment performs three major functions: (A) Measures changes in LM attitude, (B) Assists in generating steering commands, and (C) Measures LM velocity changes due to thrust. This unit manufactured by AC Electronics.

ALIGNMENT OPTICAL TELESCOPE (AOT) Provides star sighting data which is manually inserted into the LM Guidance Computer for establishing the inertial reference. This unit manufactured by Kollsman Instrument Company.

NAVIGATION BASE (NAV BASE) Provides an accurate mounting base for the Alignment Optical Telescope (AOT) and the Inertial Measurement Unit. This unit manufactured by AC Electronics.

LM GUIDANCE COMPUTER (LGC) Performs four major functions: (A) Calculates steering signals and engine disretes necessary to keep the LM on the required trajectory. (B) Positions the stable member in the IMU to a coordinate system defined by precise optical measurements, (C) Conducts limited malfunction isolation of the PGNCS by monitoring the level and rate of system signals, and (D) Supplies pertinent LM condition information to the display and control panels. This unit manufactured by Raytheon.

DISPLAY AND KEYBOARD (DSKY) Provides a two-way communication link between the operator and the LGC and the following functions may be performed: (A) Loading of data into the LGC, (B) Display of data and system configuration to the operator. This unit manufactured by Raytheon.

COUPLING DATA UNIT (CDU) The CDU, an all-electronic device, is used as an interface element between the following: (A) The inertial subsystem and computer subsystem, (B) and the computer subsystem and the controls. This unit functions primarily as an analog to digital or digital to analog converter. This unit manufactured by AC.

APOLLO 10 MISSION DESCRIPTION

1. MANNED

PRIME CREW

Thomas P. Stafford	Commander (CDR)
John W. Young	Command Module Pilot (CMP)
Eugene A. Cernan	Lunar Module Pilot (LMP)

BACK-UP CREW

LeRoy G. Cooper Jr.
Donn F. Eisele
Edgar D. Mitchell

2. Third Manned Saturn V Mission
3. First CSM/LM Lunar Orbit W/Pacific Ocean Recovery
4. Planned Duration 8 Days
5. Booster Saturn V Booster No. 505
6. Spacecraft CSM #106 and Lunar Module #4
7. Block II G & N System #206 L/M G & N System #606

APOLLO 10 MISSION OBJECTIVES

The purpose of the Apollo 10 Mission is to demonstrate the adequacy of spacecraft systems and all S/C and ground support operations to satisfactorily perform their assigned functions in deep space and in a lunar environment.

CISLUNAR AND LUNAR OPERATIONS:

LM active rendezvous	AGS/APS long duration burn
PGNCS undocked DPS performance	Rendezvous radar performance
Crew activities in lunar orbit	Landing radar test
LM communications, voice and TM	LM SHE evaluations
LM/CSM visibility, landmark tracking and orbit determination	AGS evaluations
Spacecraft thermal control docked	VHF ranging evaluation
LM OMNI antennas lunar distance	Ground support lunar distance
